

Hypaspark 3 Pin Marine Leads

The Hypaspark 3 Pin Marine Leads (Marsh marine and Seacon) is designed to be used in 2 possible wiring configurations. The 4 Pin power input plug is able to be inserted into the power input socket at 2 orientations to account for this.

In keeping with the “Powering Up” instructions simply try both orientations until the power meter give a satisfactory reading. As the wiring of Marsh connectors isn't standardized there is no guarantee that either of these orientations will work.
